

ON THE BRINK

Delivering your next generation intranet

Social and technological developments that justify a next generation intranet

A number of trends call for more functionality of your intranet:

- the increasing complexity of our society demands solutions created through the synergetic effort of several, heterogenous experts;
- the knowledge content of products and services is intensifying;
- the character of work is changing: manual labor is been replaced by brain labor and the workplace becomes digital and electronic due to increasing mobility;
- the integration of local intranets to provide an organization-wide information exchange.

From file server to publication platform and collaboration environment

The intranet is a fantastic tool to support knowledge management in your organization. Business processes are increasingly carried out in dynamic virtual workgroups. The intranet can effectively support collaboration — irrespective of time and geographic location.

The attitude of people is crucial for success

When people do not use a — possibly fantastic — system it is a waste of time and money. On The Brink focuses therefore to positively influence the attitude of people by an optimal support of the daily activities.

Broad experience

On The Brink has a broad experience in realizing next generation intranets and knows which factors are important for success.

Interested?
